

# Signs with Smart Connectivity for Better Road Safety

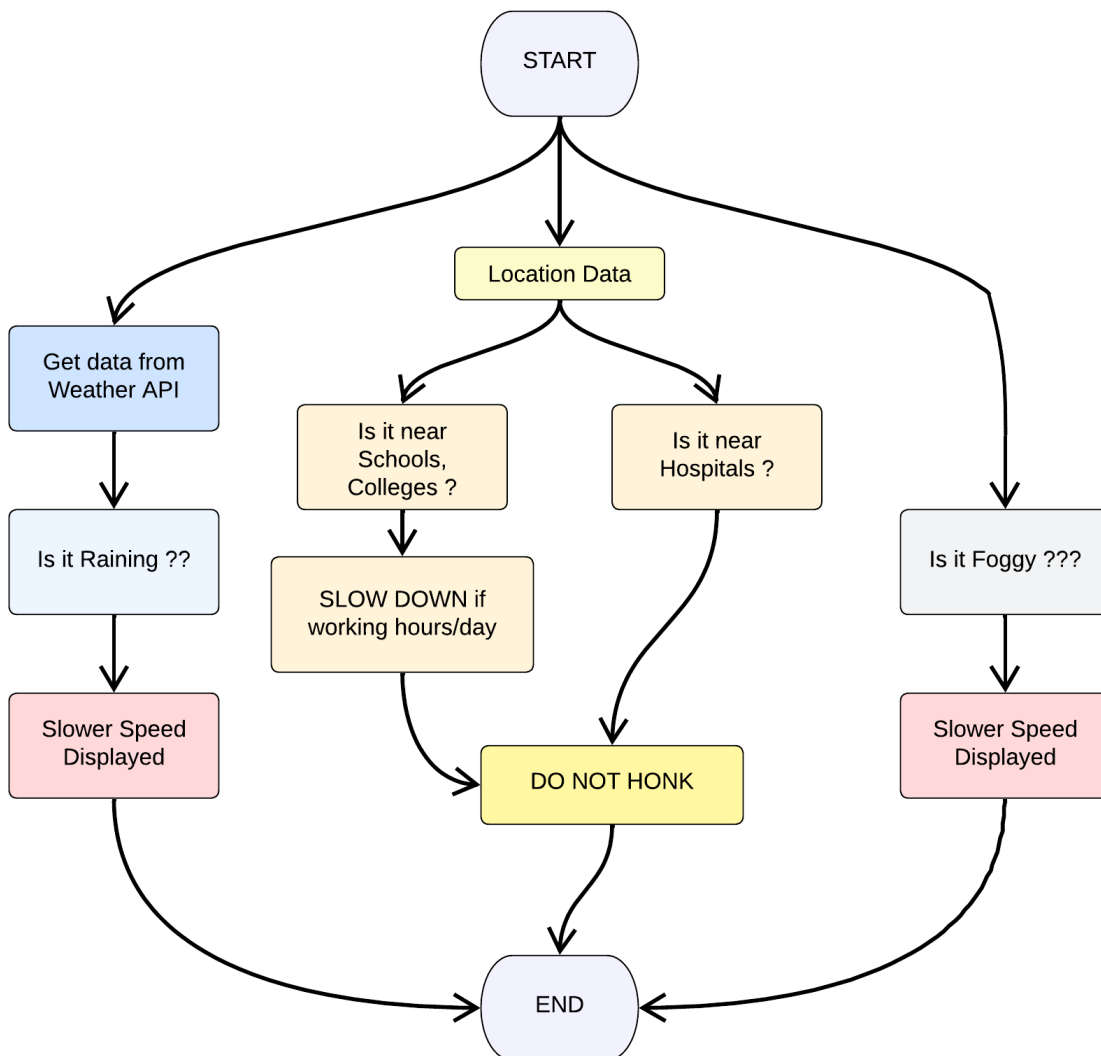

## Sprint 02

**Team ID - PNT2022TMID31848**

Sprint Goals :

Push data from local code to cloud:

Code Flow:

## Program Code :

### > **weather.py**

This file is a utility function that fetches the weather from OpenWeatherAPI. It returns only certain required parameters of the API response.

# Python code

```
import requests as reqs
```

```
def get(myLocation,APIKEY):
```

```
    apiURL =
```

```
    f"https://api.openweathermap.org/data/2.5/weather?q={myLocation}&appid={APIKEY}"
```

```
    responseJSON = (reqs.get(apiURL)).json()
```

```
    returnObject = {
```

```
        "temperature" : responseJSON['main']['temp'] - 273.15,
```

```
        "weather" : [responseJSON['weather'][_]['main'].lower() for _ in  
range(len(responseJSON['weather']))],
```

```
        "visibility" : responseJSON['visibility']/100, # visibility in percentage where 10km is  
100% and 0km is 0%
```

```
    }
```

```
    if("rain" in responseJSON):
```

```
        returnObject["rain"] = [responseJSON["rain"][key] for key in responseJSON["rain"]]
```

```
    return(returnObject)
```

## > **publishData.py**

This code pushes data to the cloud and logs data.

```
# Python code
```

```
# IMPORT SECTION STARTS
```

```
import wiotp.sdk.device # python -m pip install wiotp
import time
```

```
# IMPORT SECTION ENDS
```

```
# -----
```

```
# API CONFIG SECTION STARTS
```

```
myConfig = {
    "identity" : {
        "orgId" : "epmoec",
        "typeId" : "testDevice",
        "deviceId" : "device0"
    },
    "auth" : {
        "token" : "?-KDXUPMvDo_TK2&b1"
    }
}
```

```
# API CONFIG SECTION ENDS
```

```
# -----
```

```
# FUNCTIONS SECTION STARTS
```

```
def myCommandCallback(cmd):
    print("recieved cmd : ",cmd)
```

```
def logData2Cloud(location,temperature,visibility):
    client = wiotp.sdk.device.DeviceClient(config=myConfig,logHandlers=None)
    client.connect()
    client.publishEvent(eventId="status",msgFormat="json",data={
```

```

    "temperature" : temperature,
    "visibility" : visibility,
    "location" : location
},qos=0,onPublish=None)
client.commandCallback = myCommandCallback
client.disconnect()
time.sleep(1)

```

# FUNCTIONS SECTION ENDS

## > **brain.py**

This file is a utility function that returns only essential information to be displayed at the hardware side and abstracts all the unnecessary details. This is where the code flow logic is implemented.

```

from datetime import datetime as dt
from publishData import logData2Cloud as log2cloud

# IMPORT SECTION ENDS
# -----
# UTILITY LOGIC SECTION STARTS
def processConditions(myLocation,APIKEY,localityInfo):
    weatherData = weather.get(myLocation,APIKEY)

    log2cloud(myLocation,weatherData["temperature"],weatherData["visibility"])

    finalSpeed = localityInfo["usualSpeedLimit"] if "rain" not in weatherData else
localityInfo["usualSpeedLimit"]/2
    finalSpeed = finalSpeed if weatherData["visibility"]>35 else finalSpeed/2

    if(localityInfo["hospitalsNearby"]):
        # hospital zone
        doNotHonk = True
    else:
        if(localityInfo["schools"]["schoolZone"]==False):
            # neither school nor hospital zone
            doNotHonk = False

```

```

else:
    # school zone
    now = [dt.now().hour,dt.now().minute]
    activeTime = [list(map(int,_split(":"))) for _ in localityInfo["schools"]["activeTime"]]
    doNotHonk = activeTime[0][0]<=now[0]<=activeTime[1][0] and
activeTime[0][1]<=now[1]<=activeTime[1][1]

    return( {
        "speed" : finalSpeed,
        "doNotHonk" : doNotHonk
    })

```

# UTILITY LOGIC SECTION ENDS

## > **main.py**

The code that runs in a forever loop in the micro-controller. This calls all the util functions from other python files and based on the return value transduces changes in the output hardware display.

# Python code

# IMPORT SECTION STARTS

```
import brain
```

# IMPORT SECTION ENDS

# -----

# USER INPUT SECTION STARTS

```
myLocation = "Chennai,IN"
```

```
APIKEY = "bf4a8d480ee05c00952bf65b78ae826b"
```

```
localityInfo = {
```

```
    "schools" : {
```

```
        "schoolZone" : True,
```

```
        "activeTime" : ["7:00","17:30"] # schools active from 7 AM till 5:30 PM
```

```

    },
    "hospitalsNearby" : False,
    "usualSpeedLimit" : 40 # in km/hr
}

# USER INPUT SECTION ENDS
# -----
# MICRO-CONTROLLER CODE STARTS

```

```

while True :
    print(brain.processConditions(myLocation,APIKEY,localityInfo))

```

```
'''
```

MICRO CONTROLLER CODE WILL BE ADDED IN SPRINT 3 AS PER OUR PLANNED SPRINT SCHEDULE

```
'''
```

```

# MICRO-CONTROLLER CODE ENDS

```

## OUTPUT:

```
# Code Output
```

```
